About

Having worked exclusively in startups and being the father to two beloved children, I have always taken delight in caring for things that require immense attention, intention and a future-focused mindset. Professionally, I fell in love with the magic and creative work of building businesses and products at every stage, from startups to matured companies, and seeing the fruit of my focused work come to life in a robust and tactile way. Further, as a bit of a rarity in the field, I am deeply extroverted and thrive in cultures where I can support community building and comradery amongst a team of great people.

Work

Senior Frontend Developer for Azura

2024-Present

Azura is a decentralized trading platform that requires engineering work that is fast to get to market, while being incredibly predictable and reliable. Working in a team of highly driven engineers, we are building a seamless toolset to make a complicated world feel intuitive. This means several 3rd party integrations that need to feel native, and complex and responsive error handling at every level of the platform.

Next.js, Typescript, Tailwind, tRPC, Radix-UI, Jira, Auth0

Senior Frontend Developer for Advice By Athena

2023-2024

Working in fintech, Athena is an AI based financial advice and planning tool. With a very small team, I was close to every part of the ideation and creation of the tools that make up Athena. Using React and Typescript, I built out features while also cleaning up legacy code, and implemented conventions in the code base to make the work flow faster and more stable across all engineers. This was done while providing a cutting edge solution to a large industry, putting the power of AI into the hands of those that need it most.

React, Typescript, ChatGPT, Redux, MUI, Jest, React Query, Git

Senior Frontend Developer for Firstbase

2021-2023

Building the platform from the ground up, and refining processes and conventions as the company scaled from 15 people to 120+. I was responsible for architecting and refining the codebase built out in React and Typescript, as well as creating code standards and conventions within the frontend. This extended into leading and actioning on post-mortems. Interacting with the product and design team was a daily practice as I helped define product briefs and build out engineering plans in an agile framework. Was also involved in hiring/mentoring junior engineers. Worked closely with the QA team to define testing conventions and expectations across departments.

React, Typescript, GraphQL, Jest, Cypress, Webpack, MySQL, Jira, Trello

Frontend Developer for Crystal

2017-2021

Working in a small team to build, test, refine, and maintain several SaaS products, including mobile apps and chrome extensions. Was the sole engineer on a React Native app that had an average of 4.7 stars across iOS and Android platforms. Built highly modular components and page conventions in Typescript and Next.js that was flexible enough to shift to changing pricing models within the company.

React, Typescript, Next.js, React Native, Apollo, Webpack, Chrome Extension

Freelance Consulting, Development, Interviews, and Design

2013-present

I have done consulting work for financial institutions, non-profits, and gaming companies regarding repo architecture, best practices, how to scale your team, and product direction. I conduct technical and culture fit interviews for 3rd party businesses as well. Freelance website and design work includes using platforms such as Squarespace, Shopify, and Wordpress.

Education

BS Computer Science Entrepreneurship Minor

2012-2016

Belmont University
